RESEARCH INTERESTS

I am interested in generative models and their applications to creating real-world impact for human. My current research focuses on **controllable, interactive, and reliable video generation** toward **the broader goal of video-based world models**. My previous work spans human video generation, including audio-driven avatar generation for video dubbing [C2], diverse real-time controllability [C4], user-interactive head avatar generation [C6], NeRF-based parametric head reenactment [C3], and training-free methods for controllable and reliable video diffusion sampling [C5, C7].
